Google Data Centers

- Google Cloud will continue expanding into the following regions:
- Doha (Qatar)
- Turin (Italy)
- Berlin (Germany), Dammam (Kingdom of Saudi Arabia)
- Tel Aviv (Israel).

Services

More than 100+ services

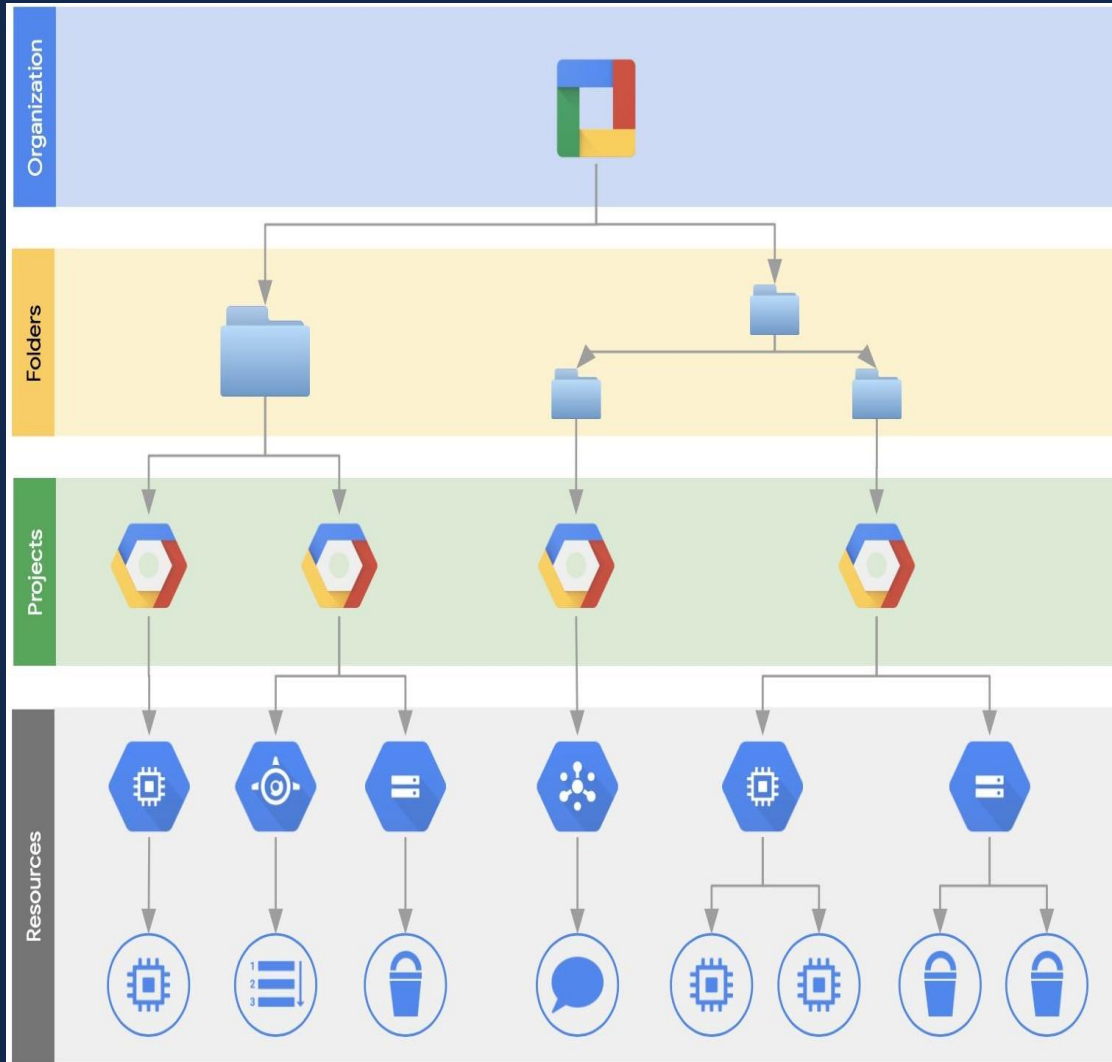

Organization Structure

GCP Resource Management

- Cloud Resource Manager provides project management & IAM functionality.
- The top level component is the GCP organization.
- An organization is tied to a GSuite OR a Cloud Identity account
- Most of the available resources are deployed into a project.
- A project is the main isolation “container” in GCP

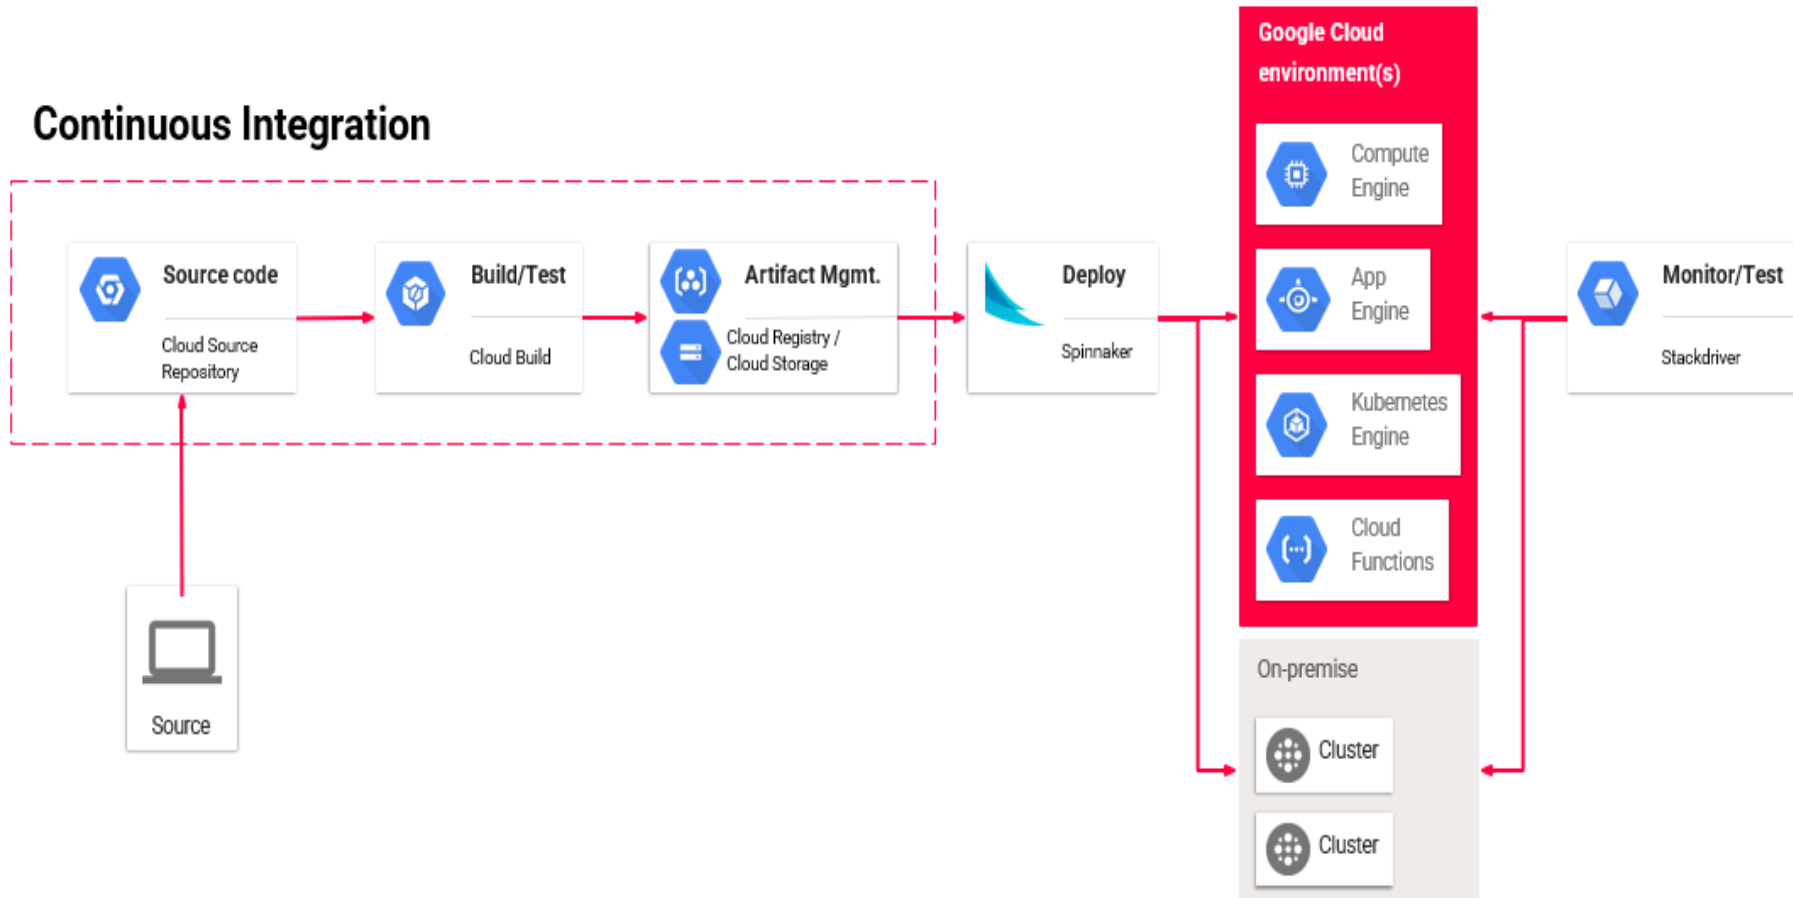

CI/CD Using GCP

Continuous Integration and Delivery on GCP

Continuous Integration

Cloud Source Repository

Google Cloud Source Repositories provides Git version control to support collaborative development of any application or service, including those that run on Google App Engine and Google Compute Engine

Google Cloud Platform

git

Google Cloud Platform

Cloud Build API

- Cloud Build, Google Cloud's continuous integration (CI) and continuous delivery (CD) platform, lets you build software quickly across all languages. Get complete control over defining custom workflows for building, testing, and deploying across multiple environments such as VMs, serverless, Kubernetes, or Firebase.

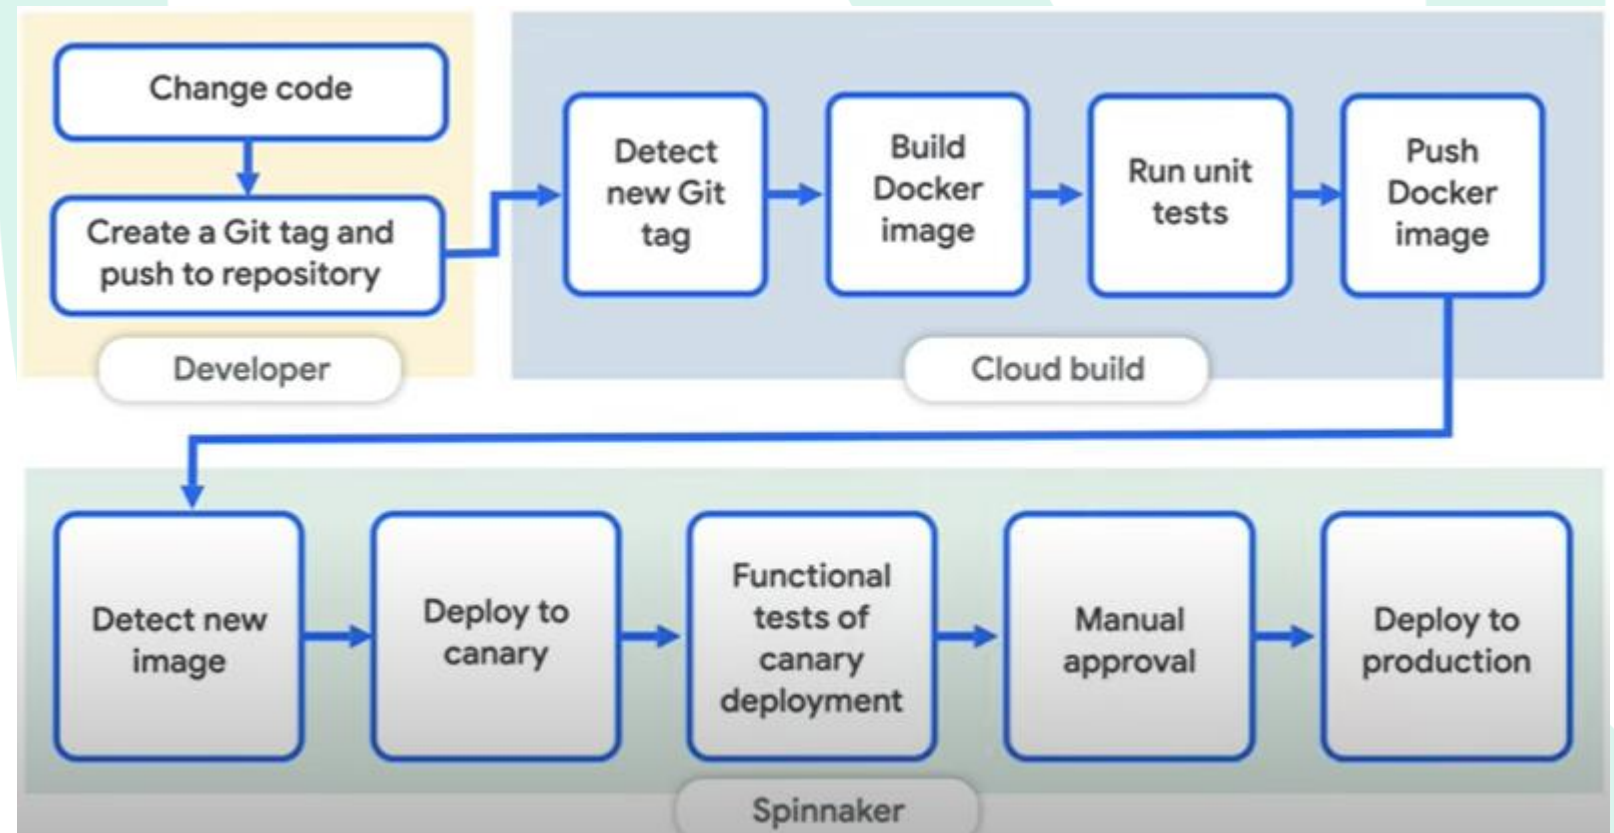

Artifact Registry

- With Artifact Registry you can store and manage your build artifacts (e.g. Docker images, Maven packages, npm packages), in a scalable and integrated repository service built on Google infrastructure.

Spinnaker

Spinnaker is a free and open-source continuous delivery software platform originally developed by Netflix and extended by Google.

App Engine

Autoscaling

Versioning

Compute Engine

- IAAS
- More Flexible
- Chose OS and type of Hardware

Monitoring

Operations
Logging

Debugger

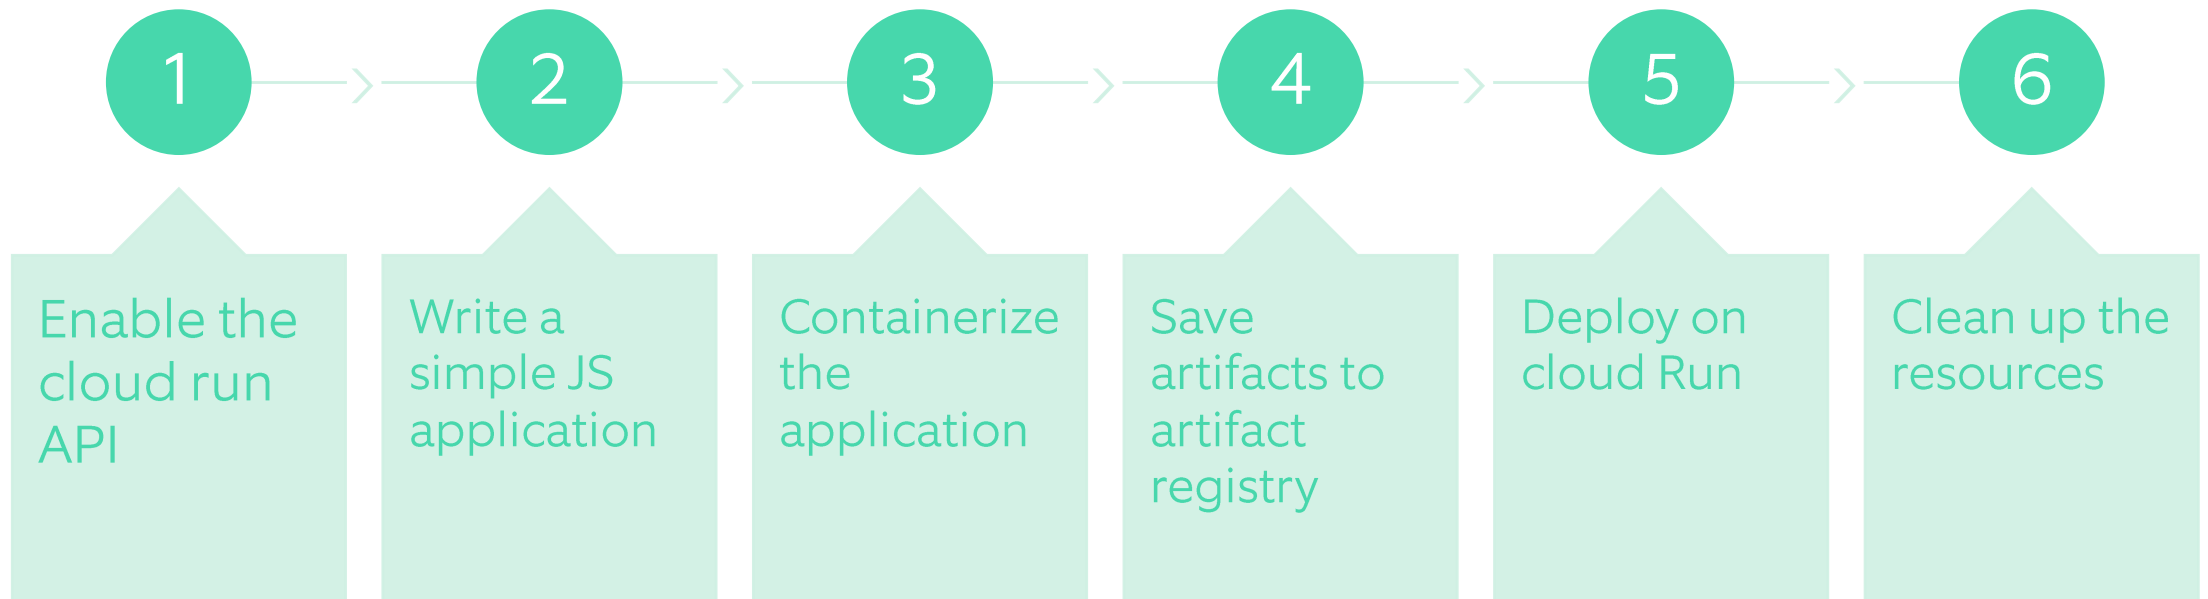

Error Reporting
